

# MARITIME SURVEILLANCE WORKSHOP

Wednesday October 8th, 2014

French Embassy Singapore

PUBLIC REPORT

**Singapore, October 8th, 2014.**

CLS today gathered at the French Embassy Singapore about 50 persons, representing 14 countries, from civilian and military maritime authorities, but also from the private sector (insurance, O&G, shipping. . .).

Presentations have been given about state of the art of the best today available technologies for maritime surveillance by satellite. Focus has been made on the data fusion services relying on ship tracking information and Earth Observation capabilities. Use cases have been presented to illustrate the diversity of current and possible future applications. Some participants also provided operational feedbacks and testimony about their use of CLS services.

During the afternoon session, specific interest of the audience was on technical and operational details directly related to the CLS existing 24/7 service chain, as well as integration into existing systems or operational processes. A roundtable with constructive discussions and a quiz offered to the group the chance to discuss perspectives.

Thank you to all participants and see you next time!

## About CLS:

CLS is an expert of satellite-based maritime surveillance services with near to 30 years experience providing services to governments, industry and the scientific community. As a subsidiary of the French Space Agency (CNES) and provider of satellite based maritime information services, CLS addresses the needs of a variety of clients for worldwide environmental monitoring, sustainable management of marine resources, maritime security and safety.
